Abstract

A Chinese text entry system and method is provided to allow users to enter a character to a device such as a computer by adding a first few strokes required for the character using a joystick or its equivalent. By simply moving the joystick in the direction of the first few strokes which are used to start writing a character, or in some case even before any stroke is added, a user can select from a displayed selection list. The selection list is context sensitive, varying depending on the last character entered.
